  - Refrain from rubbing or wiping off the Leather Protection Cream.
  - The effect of Leather Soft Cleaner may be vary depending on the type, oldness and condition of the stain.
  - Leather Soft Cleaner and Leather Protection Cream cannot be used for nubuck, suede, velour.

### Trick

Foam can be easily made by squeezing the sponge a couple of times in a container.

### Trick

The cleaner may damage the leather if the amount of foam is insufficient. Apply foam as much as shown on the picture.

※It is recommended to try this product on a invisible surface before applying to prevent unexpected damages.

Start from step 1 for products in use

## STEP 1

Shake a bottle of "Leather Soft Cleaner". Let a sponge\* absorb the cleaner. Squeeze the sponge to make adequate amount of foam.  
\*The sponge is included in the kit.

## STEP 2

Gently scrub as if you draw circles on stains. Make sure to keep adequate amount of foam by adding the cleaner. The stain must be wiped off with a clean dried cloth or paper towel before adding the cleaner.

## STEP 3

Wipe off the stain with clean soft cloth before the foam dries out. Wait about 30 minutes for the leather to dry. Repeat STEP1~3 again if the stain remains.

Start from step 4 for brand-new products

## STEP 4

Shake a bottle of "leather protection cream". Apply the cream on a touch-up cloth. Make sure that the surface of the leather is dried. Evenly spread the cream all over the surface until the leather is moisture.  
※Refrain from rubbing leather strongly.

## STEP 5

Wait about 30 minutes to 1 hour for the leather to dry. Although, the protection cream is effective after 48 hours, the products can be used as soon as they are dried.  
※It is recommended to repeat step 4 to 5 on the parts that are frequently touched (for example: arms and backrest of a sofa).

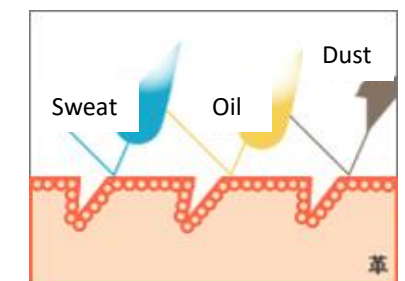

### Point

The color of surface becomes thicker after applying the cleaner or the protector. The color turns back to the original color after dried. (Aniline and semi-aniline leather)

Applying protection cream before damaging leather will create a protection layer with high ventilation. This will prevent leather from being damaged or stained.

※The protection will last for approximately 6 months. Implement maintenance once or twice every year is recommended.
