

Oil finish wooden products

This product adopts "oil finish" in order to give natural luster without obstructing natural respiration of wood. Daily care and maintenance on a regular basis help to extend the life of oil finish furniture.

Daily care

- Wipe with soft cloth.
- Don't place any hot goods directly on it.
- Whenever the product gets wet, please dry it quickly. Leaving moisture may cause scars, warps, or cracks.
- Water drips may cause stains.
- Put mats or coasters before placing hard substances to prevent scratches.

Maintenance

Oil finish is a finish where vegetable-oil-based paint is impregnated into wood, which, different from chemical paints, requires periodical maintenance because it doesn't form a hard coating on the surface. Scars may be prominent in around half a year at the earliest. Doing maintenance once every two or three months is recommended in order to keep wood's natural beauty.

Wood Care Kit for oil finish products is optional. For more details, please contact our staff.

Please keep this leaflet together with other instructions for the future reference.
